

Activating the Mobile Pairing Feature On Your Plantronics Savi Wireless Headset

The multi-device Savi series of Plantronics headsets provides the user with true Unified Communications features. You can use the one headset to handle calls on your:

- Telephone
- PC, or
- Mobile

However, in Australia, the default settings **have the mobile phone connectivity (i.e. Bluetooth) disabled**. This has proven to be frustrating for those owners who wish to benefit from this feature.

There are two methods available to activate this feature:

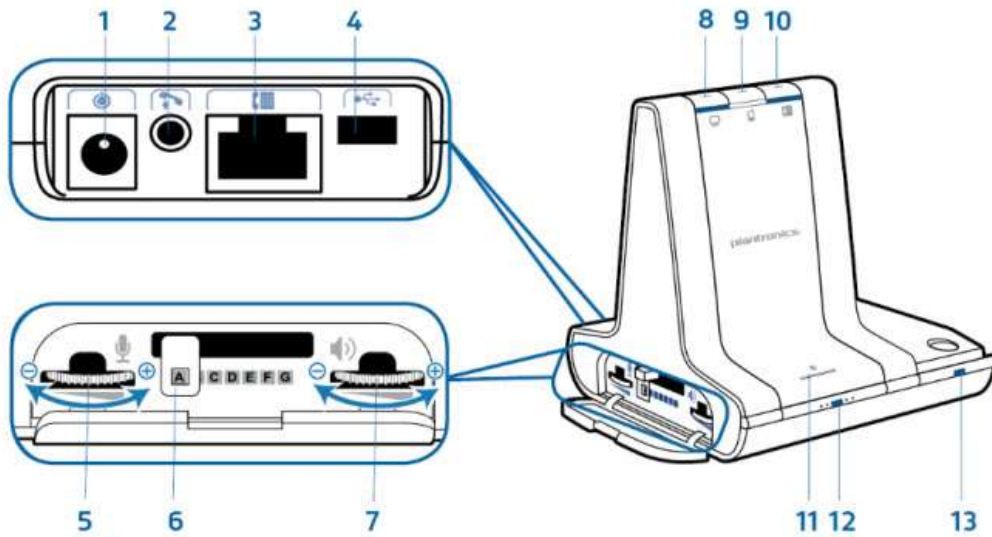

- Plantronics Spokes software
- Manually

The **Spokes software** involves downloading, installing and running the software. While this software provides a lot of beneficial functionality, many organisations will not let you install software on your computer.

The **manual method** involves a few simple button presses on your headset base. The process is as described below:

The Savi Bluetooth interface (to a mobile phone) can be disabled/enabled manually by pressing the subscription (12) and base mobile phone (9) buttons on the headset base simultaneously until the base mobile phone LED (9) flashes. When the base mobile phone button LED flashes red four times, Bluetooth is disabled and when it flashes green four times, it is enabled.

For button locations/numbering, refer to the diagram on the next page.

- 1** Power jack
- 2** Handset lifter jack
- 3** Telephone interface cable jack
- 4** USB port
- 5** Desk phone speaking volume
- 6** Desk phone configuration switch
